Professional Summary

Frontend Developer working with JavaScript (ES6+), TypeScript, and React. I build responsive and user-friendly web applications with a focus on clean, maintainable, and scalable code.

Experienced in developing component-based interfaces, managing application state with Redux or Context API, integrating REST APIs, and deploying applications using modern tools such as Vite, Firebase, and Supabase.

I focus on performance, accessibility, and responsive design to ensure applications work smoothly across desktop and mobile devices. I continuously improve my skills by building real projects and learning modern frontend development practices.

Technical Skills

Frontend Development

JavaScript (ES6+), TypeScript, React, Redux, Context API

HTML5, CSS3, SASS / SCSS

Tailwind CSS, Bootstrap

Responsive Design, Cross-browser Compatibility

UI Interactions and Animations

Architecture & Engineering Practices

Component-based architecture

REST API integration and data handling

Modular and reusable code structure

Performance optimization and accessibility best practices

Unit and integration testing

Tools & Platforms

Git, GitHub

Vite

Firebase

Supabase

Projects

Canyoufind — Interactive Entertainment Platform

Interactive web platform where users explore locations and participate in quest-based challenges. Implemented user authentication, quest participation mechanics, and a reward system with in-game **coins**. The application features a responsive interface and smooth user interactions across desktop and mobile devices.

Tech: JavaScript, React, Bootstrap, Vite, Firebase, CSS / SCSS

Live: <https://canyoufind.world>

GitHub: <https://github.com/papchenko/canyoufind>

Recrun — Athlete Activity Tracking Platform

Web application for runners and athletes to track activities, analyze performance, and participate in team competitions. Implemented activity tracking, data visualization, and structured history of user progress with a responsive and user-friendly interface.

Tech: JavaScript, React, Bootstrap, Firebase, Vite, CSS / SCSS

Live: <https://recrun.pro>

GitHub: <https://github.com/papchenko/recruns>

BookFlow — Online Book Marketplace

Full-featured marketplace where users can browse, purchase, and sell books. Implemented authentication, premium seller functionality, and an intuitive interface for browsing and managing listings.

Tech: JavaScript, React, Tailwind CSS, Firebase, Vite

Live: <https://bookflow.guru>

GitHub: <https://github.com/papchenko/bookflow>

DopaSet — Controlling Dopamine Addiction

A platform that helps you understand and manage your digital habits. Track usage, reduce distractions, and create space for what really matters.

Tech: TypeScript, React, Tailwind CSS, Firebase, Vite

Live: <https://dopaset.space>

GitHub: <https://github.com/papchenko/dopaset>

Education

CS50 – Fundamentals of Programming

BrainBasket Foundation
